Hi,
Zabbix and Job Arranger latest version on Redhat 8.0 environment

How to schedule a calendar to run on every month - Wednesday at 10:00AM for a particular job or multiple job.

In Boot Time - how to set Cycle to run on every day, every specific day in a month.

#1 - 2019/11/01 11:50 -

Here specified information about Cycle and Schedule on particular day execution information is insufficient in user manaul
https://www.jobarranger.info/document/doku.php?id=4.0:operation:schedule:06schedule-activation

-

Thank you for using Job Arranger.

Manual for monthly calendar scheduling is below.
https://www.jobarranger.info/document/doku.php?id=4.0:operation:calendar:04calendar-year

For scheduling Cycle to run on every day, every specific day in a month,
You can combine above calendar and below (which you already found).
https://www.jobarranger.info/document/doku.php?id=4.0:operation:schedule:06schedule-activation

Additional information, filter is also useful for specific day on working-day.
https://www.jobarranger.info/document/doku.php?id=4.0:operation:calendar:11filter

Sorry for providing only Japanese manual, please use web translation - they are quite excellent these day.

Best Regards,
